

FSC

AIR PRESSURE WIPER MOTOR

The new super power FSC air pressure wiper motor is engineered to meet the most rigid heavy-duty requirements of all types of cross-country trucks and buses. This unit is especially recommended for long length blades and arms and for heavy-duty parallelogram wiper arm applications. Direct or linkage drive to single or dual pivots is available as required.

Features: Heavy-duty gear drive with gear locked to steel shaft . . . permanently lubricating

140° STROKE SHOWN. Performance data for different stroke motors available on request.

oil impregnated bronze bearings . . . aluminum spool reversal valve, air actuated . . . uniform velocity throughout the entire 140° of motor piston travel . . . maximum power through selective linkage leverage . . . rugged 5/8" diameter interchangeable shaft . . . power positive parking — selective right or left . . . Blade parking beyond the running range . . . maximum power with minimal air consumption. Will operate under full load on as little as 20 P.S.I.
